Dear Professor Weeramanthri

CLIMATE HEALTH WA INQUIRY

Thank you for your invitation to submit a written submission to the Climate Health WA Inquiry.

The intrinsic links between planetary health and the health of individuals is broadly acknowledged. A safe environment and climate is fundamental to health¹ and climate change continues to compromise the population’s health and wellbeing.² There is also a growing body of evidence suggesting that an increasing reliance on finite natural resources is unsustainable resulting in increasing inequities in health across and within countries now and for future generations³ particularly among disadvantaged people and communities.⁴

Whilst climate change represents an emerging and increasingly complex problem that requires multi-disciplinary engagement and action, some of these responses may include more traditional public health actions.⁵ The Sustainable Health Review Final Report to Government (Final Report)⁶ acknowledges this within its recommendations, emphasising the need to reduce the health system’s environmental footprint and highlighting the requirement for public health adaptation strategies such as principles of smart cities.

As such, addressing issues relating to climate change is a significant public health issue⁷ and facilitating good planetary health is a key challenge for health promoters globally. Aligned to the Final Report recommendations increasing investment in prevention will assist in providing additional opportunities to address issues relating to climate change and the health system from a public health perspective.
As the Chair of the Western Australian Health Promotion Foundation Board and the only State Government body dedicated solely to health promotion, Healthway retains a strong commitment to achieving a healthier Western Australia. Through its grants programs and aligned to evidence based socio-ecological models of health promotion, Healthway continues to advance public health initiatives that relate to the health of individuals and communities, and the environments in which they live.

Some examples of Healthway’s support includes investment in research for evaluating current active travel programs across Western Australia to inform the development of new and more appropriate active travel strategies. Healthway has also provided funding for the ‘Healthy Active by Design’ web-based planning tool to provide guidance for planners, developers and Local Government to ensure that communities and neighbourhoods are designed to support and encourage physical activity.

Whilst Healthway has supported a number of public health initiatives related to the Inquiry, I am sure that more can be achieved in the future. I look forward to reviewing the outcomes of the Inquiry for consideration and application within Healthway’s grants programs.

Yours sincerely

Professor Peter Klinken AC FAHMS FTSE CitWA
Chair, Healthway Board
