

2016 Research Skills Seminar Series

The Research Skills Seminar Series is developed and delivered through the Research Education Program at the Princess Margaret Hospital, with funding from the Princess Margaret Hospital Foundation. Our mission is to offer generic research skills training to health practitioners across the entire research process - to help ensure a high standard of research and the best possible outcomes for clinical researchers, study participants and the WA community. Each seminar offers practical, concise and timely information on a key topic in health research, presented by an expert in the field. Comprehensive handouts are provided with additional resources including other known training opportunities. The seminars are free of charge, open access, and available face-to-face or by videoconference. A light meal is provided to those who join us on site, and certificates of attendance can be provided on request to all attendees.

Date	Topic	Presenter
12 Feb	Research Supervision	Sunalene Devadason
4 Mar	Sample Size (TBC)	Julie Marsh
8 Apr	Ethical Principles	Nik Zeps
29 Apr	Biostats Introduction (TBC)	Julie Marsh
