Are you looking for a job where you can work with people and make a real difference?

Have you thought about nursing or midwifery?

Introduction

Most nurses and midwives choose to work in a hospital delivering direct patient care, but did you know that nurses and midwives also have the ability to work in many different areas?

Some of these include occupational health and safety, policy development, education and training, as well as management, leadership, primary health and research.

The numerous pathways available lead to a wide variety of settings in which to work.

This booklet provides information on the nursing and midwifery professions – what it’s like to be a nurse or midwife, the different specialties and the educational pathways to get you there. Information about scholarships and who to contact for further details are also provided.

There is also information on the benefits of being a nurse or midwife, including: the opportunities to travel and work in regional Australia, interstate or overseas; flexible hours to suit your lifestyle; and the ability to change your work scene by choosing to specialise or trying a different practice setting.

So if you are trying to decide what the next step in your life will be, consider midwifery or nursing. It can take you anywhere.

If after reading this booklet you would like to discuss nursing or midwifery further, please don’t hesitate to contact us:

Nursing and Midwifery Office
Department of Health, Western Australia
Free call: 1800 11 22 72 (free in WA from land line only)

Benefits

You can go places
The world will always need nurses and midwives. You can work in the metropolitan area or in one of our country health services. WA nurses and midwives are highly regarded nationally and internationally. This means you can work almost anywhere in the world and continue to expand your career. Travel as much or as little as you want.

Work in a challenging environment
A typical nurse or midwife is up and about, caring for patients, consulting with colleagues or supporting patient’s visitors. You also get to do a lot of problem solving and thinking on your feet. Something different happens every day.

Choose your hours
Nurses and midwives work throughout the day and night, so you can choose shifts that work around your lifestyle – sport, shopping, kids, and so on. A variety of shifts are available, including weekday, weekend, morning, afternoon and night shift. Work is offered on a full-time, part-time or casual basis.

Change your work scene
Nurses and midwives can apply for positions within a hospital, or in a non-hospital setting such as a school, cruise ship, child health centre, university, community centre, aged care facility, prison, mine site and many more.

Generous allowances
Most full-time nurses and midwives who do shift work have nine weeks paid leave per year. They also get extra pay for working afternoon, night, or weekend shifts.

Choose your adrenalin level
It’s up to you. Opt for the adrenalin of emergency, intensive care or labour ward, or choose to work in a general or specialised setting.

If you’re after something different you can work in a community health centre, school, university, government department or in areas such as education, research or policy development.
Change your specialty
Change it up a bit – you can move from specialty to specialty whenever you feel like a new challenge or become a specialist in one area. There are so many options - see page 39.

Make a difference
There’s no doubt about it, nursing and midwifery are careers with heart. These professions are a meaningful way to contribute to society. You’re there to help people get better. Your patients and their families will trust you and look to you for reassurance.

Be a critical thinker
Nurses and midwives will often be the ones who will notice any problems with their patient and often need to make quick decisions about their patient’s care needs.

Look after your community
Many nurses and midwives will tell you how much their skills and knowledge are valued by their friends and family. What better way is there to ensure that your loved ones, your neighbours and your community are provided with the best health care possible?

Be in demand
There are many great nursing and midwifery jobs across Australia and overseas. WA’s growth and brand new hospitals mean nurses and midwives will continue to be highly sought in the coming years.
Enrolled nursing, registered nursing and midwifery

What’s the difference?

Enrolled nurse
To become an enrolled nurse (EN) you’ll study for twelve to eighteen months full-time through a state or private training provider for a Diploma of Nursing.

On completion of the course, enrolled nurses can practice across a range of clinical settings.

Enrolled nurses work under the supervision of a registered nurse to provide care to patients from all kinds of backgrounds and age groups.

The opportunity for promotional positions is a little more limited for enrolled nurses than for registered nurses. Enrolled nurses can progress their career by becoming an Advanced Skill Enrolled Nurse, or decide to pursue further studies such as an Advanced Diploma.

Enrolled nurses can go on to university to become a registered nurse or midwife. They are usually given recognition of prior learning and have the length of their course reduced.

Registered nurse
To become a registered nurse (RN) you’ll study at university to obtain a Bachelor of Science (Nursing). The course takes three to three and a half years, if studying full-time. The responsibilities of a registered nurse range from providing direct patient care to coordinating care delivery, promoting better health, managing staff, undertaking research or providing education.

Registered nurses have the most opportunities for employment in a huge variety of settings. There are many career advancement options, the capacity to specialise (see page 39), lead teams, move into executive roles or work in advanced practice roles, such as nurse practitioner (see page 40).

Midwife
To become a midwife you’ll study at university to obtain a Bachelor of Science (Midwifery), or by becoming a registered nurse first, and then undertaking postgraduate studies in midwifery (18 months full-time).

The responsibilities of a midwife generally involve direct clinical care, but like registered nurses, there are a number of other employment opportunities including work in research, management, education and policy development.

Midwives work in a variety of settings such as clinics, hospitals, birthing centres and in women’s homes. The role of the midwife may also involve other aspects of women’s health, including sexual or reproductive health, lactation (breastfeeding) consultancy, child health, community health and educating parents how to care for their child.

Midwifery is not just a profession for women, men make great midwives too.
Entry paths to nursing and midwifery

What Year 12 subjects should I consider to qualify for nursing or midwifery?

You will need to pass Year 12 English and Maths if you wish to study an enrolled nursing course.

It is recommended that you contact enrolled nursing course providers for further information about entry requirements. Alternative pathways are also available to gain entry.

For entry into registered nursing and midwifery courses, the most appropriate subjects to study in Year 12 are Human Biology or any other science subject, plus Maths and English. These subjects will provide a sound knowledge base for undertaking nursing and midwifery studies, however, this can vary between universities so it is always advisable to research each university’s current prerequisites and entry requirements.

The Australian Tertiary Admission Rank (ATAR) to enter a registered nursing or midwifery course varies from university-to-university and year-to-year. It is recommended that you contact each university to find out the cut-off score for each of their courses (a cut-off score is the minimum score needed to enter the particular university). Some individual course cut-offs may be higher, due to high demand.
As an Assistant in Nursing (AIN) you work as a member of the nursing team, assisting nurses to give general patient care. You will support patients with tasks like helping them with their hygiene, their meals and assisting them to move into and out of bed, and to mobilise around the ward. You will assist nurses to monitor a patient’s condition by measuring blood pressure, temperature and respiration rates.

Working as an AIN can be a rewarding career in itself, but it is worth noting that the AIN qualification can be used as a pathway into a career in nursing or midwifery, plus this qualification will allow you to continue to work as an AIN while you study to become a nurse or midwife. If you have not satisfied the necessary secondary education requirements, you may be eligible to undertake a Certificate III in Health Service Assistance and use this as a pathway into nursing or midwifery - see “Assistant in Nursing” section.

There are also other bridging programs offered by the various education providers that will prepare you for entry to the course you want, so make contact with them to find out more.

A Certificate IV Preparation for Nursing Education will prepare you for entry into a Diploma of Nursing course a Bachelor of Science (Nursing or Midwifery) at university.

A Certificate IV in Health Science Foundations will prepare you for entry into a Bachelor of Science (Nursing or Midwifery) at university or a Diploma of Nursing.

Some private training providers also provide courses to obtain a Diploma of Science (Health Studies) or Diploma of Health Science. Once completed, universities may grant enrolment into the second year of a Bachelor of Science (Nursing).
Enrolled nurse to registered nurse conversion courses

Once you have completed an enrolled nursing course, you might later decide to progress your career into registered nursing. Some people choose enrolled nursing as an alternative pathway to university if they were unable to gain direct entry, or, so that they can work and gain further experience before and while they study to become a registered nurse or midwife.

Generally the conversion program equates to two years full-time study but may vary. It is recommended that you contact the universities directly for information about their entry requirements.

I already have a tertiary qualification in another field, how do I become a registered nurse?

If you want to study registered nursing and have already completed another tertiary qualification, you may be eligible to complete a graduate masters course.

On completion of a Master of Nursing Practice or a Master of Nursing (Graduate Entry) course, graduates are able to register with the Nursing and Midwifery Board of Australia as a registered nurse. Graduate masters courses are two years in duration when undertaken full-time.

For further information contact:

Studying midwifery

Undergraduate midwifery
Edith Cowan University offers a four-year full-time dual degree (Bachelor of Science (Nursing) / Bachelor of Science (Midwifery). This qualification will make you eligible for registration as a registered nurse and as a midwife allowing you the flexibility to work in both professions.

Both programs are highly competitive. Please contact the university directly for further information.

Postgraduate midwifery
Postgraduate midwifery students are registered nurses, who already have a Bachelor of Science (Nursing) qualification or equivalent. The length of the course varies depending on the mode of study, but the most common arrangements for postgraduate degrees in midwifery are 18 months full-time. Further information about course lengths can be obtained from the universities.

Postgraduate midwifery students are employed in a maternity setting during their clinical experience. There are many metropolitan and country hospitals in WA where midwifery students can work to gain the required amount of clinical experience to achieve competency and fulfill course requirements.

Note: You should contact the individual provider to find out if they offer part-time courses and to find out if you are eligible for any credits towards course entrance based on previous qualifications you have obtained or partially completed, or any work experience you have.
Support for Aboriginal students

Aboriginal student services are available at most universities and other education facilities. They offer a range of services to encourage the participation of Aboriginal students. You'll find staff welcoming, supportive and friendly. They will offer advice on how to join a course and how to stay on track.

Some of the information and services offered include:

- Mentoring assistance and cultural support
- Financial support through scholarships and ABSTUDY
- Tutoring assistance and access to learning resources
- Information on bridging programs or ways to qualify for entry
- General student advice
- Connection and engagement with other Aboriginal students
- Distance learning information
- Accommodation and childcare information and assistance.

We encourage you to become familiar with these free and confidential services and find out how they can assist you on your learning journey.

Aboriginal Health also has an Aboriginal Cadetship Program that offers Aboriginal students the opportunity to gain paid work experience in a non-clinical role, while completing an undergraduate nursing or midwifery degree.

Mature age entry

There are several ways for mature age students to enter nursing and midwifery. Entry into nursing and midwifery courses varies depending upon your work experience and education.

You should contact the individual education providers to find out if you are eligible for any credits towards course entrance based on previous qualifications you have obtained or partially completed, or any work experience you have. This is what is sometimes called “recognition of prior learning” or “RPL”.

You may need to complete a University and State Training Providers Preparation Course; a bridging course through one of the education providers, or a Special Tertiary Admissions Test (STAT) before applying for entry into any nursing or midwifery course within Western Australia.

For further information contact the individual education providers, or:

University and State Training Providers Preparation
www.tisc.edu.au/static/guide/stat.tisc#stat_prep

Tertiary Institutions Service Centre – STAT
www.tisc.edu.au/static/guide/stat.tisc
Scholarships

The Nursing and Midwifery Office provides a range of scholarships and fellowships totaling around $2 million each year. We offer financial assistance to people who are:

- studying to become a nurse or midwife
- nurses and midwives studying a postgraduate qualification
- former nurses and midwives wanting to return to the workforce after a prolonged break.

Studying to become a nurse or midwife

Studying to become a nurse or midwife will lead to an exciting profession full of diverse experiences and opportunities. A scholarship can help you discover your career in nursing or midwifery and cover some of the study costs. Examples of courses we fund are:

- Studying to be an enrolled nurse, such as a Diploma of Nursing.
- Studying to become a registered nurse and/or midwife, such as a Bachelor of Science (Nursing), Bachelor of Science (Midwifery), or Bachelor of Science (Nursing) / Bachelor of Science (Midwifery) dual degree.
- Conversion degrees, such as enrolled nurses bridging to a registered nurse qualification; converting a diploma to a degree; registered nurses becoming midwives or undertaking honours or a graduate entry masters program in nursing.

Postgraduate studies

Postgraduate scholarships are available to nurses and midwives looking to broaden their expertise through education. Examples of courses funded are:

- **Postgraduate specialisation scholarships** to assist enrolled nurses and registered nurses to complete specialisation to advance their knowledge and skills in their clinical or non-clinical field.
- **Midwifery scholarships** to assist midwives to complete courses such as a Graduate Diploma or Masters of Midwifery.
- **Nurse practitioner scholarships** to assist registered nurses to study a Master of Nursing (Nurse Practitioner).

Returning to nursing and midwifery

Scholarships are offered to enrolled nurses, registered nurses and midwives to study to re-gain their registration with the Nursing and Midwifery Board of Australia. Scholarships are paid on successful course completion.

How to apply

Applications open annually.

To apply online, or for full details about application dates and eligibility, visit: [www.nursing.health.wa.gov.au](http://www.nursing.health.wa.gov.au)

Universities and other professional organisations also offer scholarships.

As a nurse you can specialise in one or several areas during your career. To specialise, you will need to undertake postgraduate education and/or gain extensive nursing experience on the job. There are some specialties where only registered nurses are employed and may not be available to enrolled nurses. A number of specialty areas are listed below:

- Aboriginal health
- burns
- cardiology (heart)
- child health
- clinical nursing
- community
- coronary care
- diabetes education
- dialysis
- domiciliary nursing (nursing care in the home)
- education (hospital or university based)
- emergency
- family health
- gerontology/aged care
- infection control
- intensive care
- management
- medical nursing
- mental health
- neonatal intensive care (newborn babies)
- nurse practitioner
- occupational health
- oncology (relating to cancer)
- paediatric (children)
- peri-operative (operating theatres)
- plastic surgery
- policy/project management
- public health
- rehabilitation
- remote area nursing
- research
- rural nursing
- surgical nursing
- wound management.
Advanced and extended roles

Healthcare and technological advances are reshaping what nurses and midwives can do.

With extensive experience and additional study, nurses and midwives are able to push through traditional boundaries to access many advanced practice roles. Expert nurses and midwives are increasingly establishing themselves in autonomous roles such as Nurse Practitioner or Endorsed Eligible Midwife. They can even set up their own business as independent practitioners.

Nurse practitioner

A nurse practitioner (NP) is a highly experienced and knowledgeable registered nurse who has undertaking a relevant masters degree and has had extensive clinical experience.

NPs provide primary, acute and specialty healthcare to patients of all ages and walks of life - in a variety of healthcare settings. NPs assess patients, order and interpret diagnostic tests, make diagnoses, initiate and manage treatment. This includes prescribing medications and referring to other healthcare professionals, as required.

Endorsed eligible midwife

An endorsed eligible midwife is a very experienced midwife who has been deemed competent across the full scope of midwifery practice. Endorsed eligible midwives have completed an approved professional practice review program and prescribing course, allowing them to prescribe medications as part of their midwifery work.
Mental health nursing

With the current statistics of one in every five Australians experiencing a mental health problem sometime in their lifetime, mental health nurses are in high demand.

Mental health nursing is a specialised area of nursing that cares for people with mental health problems and assists them in their recovery journey.

Mental health nurses can be enrolled nurses or registered nurses, but to become a specialist mental health nurse, you are required to undertake a postgraduate course in mental health nursing or gain extensive mental health nursing experience on the job.

Mental health nurses care for children, adolescents, adults, older adults, or those in the justice or prison systems.

They work in partnership with their patients, the patient’s families, their partners and the community. Mental health nurses also work as part of a team with other health professionals including psychiatrists, clinical psychologists, social workers, counsellors, medical doctors and occupational therapists.

Mental health nurses work in a variety of settings including hospitals, clinics, outreach services, community services, drug and alcohol services and prisons.
Working conditions

Hours
The majority of nurses and midwives work in hospitals, which usually involves shift work. Employers, such as hospitals, offer flexible shift options (weekdays and/or weekends, day and/or night duty). Work can be offered on a full-time, part-time or casual basis. This provides you with plenty of options to achieve a reasonable balance between work and your personal life.

The hours worked will depend on your experience, the clinical or specialty area you work in, and which hospital or health service you are employed by. In some other settings nurses and midwives may work normal office hours.

Examples of typical shift times:
Early Shift (day shift)
7.00am–3.30pm
7.00am–2.30pm
Late Shift (afternoon shift)
1.00pm–9.30pm
2.00pm–9.30pm
Night Shift
9.00pm–7.30am
9.30pm–7.00am

Some employers offer variations such as 12 hour shifts 7am–7pm and 7pm–7am or “family friendly” hours such as 9am–2pm, 6pm–11pm or 5pm–1am.

Salary
As well as being personally and professionally fulfilling, nursing and midwifery can be financially rewarding too. Salaries for nurses and midwives are competitive with many other careers. To view current awards and agreements relevant to nurses and midwives, please visit wwww.health.wa.gov.au/Articles/A_E/Awards-and-Agreements (Note: these are dependent on where you work and are only relevant to the WA public health system).

Shift work can also provide financial advantages. Various shifts attract loadings that greatly increase your pay. For example on a Sunday as a registered nurse, you will receive an additional 75 per cent on top of your base hourly pay rate.

Leave allowances
Nurses and midwives who work full-time and do shift work, receive five weeks annual leave per year. You also receive ten public holidays (which you can use at other times) and 12 accrued days off (if negotiated on employment). This means that most nurses and midwives have nine weeks paid leave per year.

Work while you study
Some people like to work in the health setting while they study. There are courses you can do that will qualify you to work as a carer, patient care assistant or Assistant in Nursing.

Students who are enrolled and completing a Bachelor of Science (Nursing) may be able to negotiate and obtain RPL using their academic transcript to obtain the Acute Care AIN qualification with one of the state training providers. WA Health advertises jobs at www.jobs.health.wa.gov.au
Graduate opportunities

There are a broad range of opportunities for employment for newly qualified enrolled nurses, registered nurses and midwives. This might include a graduate program at one of the many Western Australian public hospitals and health services, on completion of an undergraduate course. Graduate programs assist the transition into the nursing and midwifery workforce in a supportive environment. You will gain exposure to a variety of clinical settings, while consolidating theoretical learning and critical clinical skills and judgment. For more details visit www.gnc.health.wa.gov.au

Work experience

The Get Real Experience and Try (GReaT) Nursing and Midwifery Work Experience Program has been developed to encourage high school students to experience nursing prior to studying it with a state training provider or at university. Students are encouraged to discuss their interest in this program with their school career counsellor or their VET coordinator prior to submitting an application. Full details are available at www.nursing.health.wa.gov.au
